

JK/JKU Holster Mount R/H Installation Instructions

Scan this code on your smartphone or visit our website for a step-by-step instructional installation video!

www.klw-mfg.com

Required tools: 18 mm socket & ratchet, #2 phillips head screwdriver

Step 1

Mount Blackhawk!® SERPA™ Holster to the Upright Post using the (3) existing Blackhawk!® holster supplied screws.

Select your desired configuration - Driver side or Passenger side. This will determine which way you will mount the Upright Post to the Mount Arm.

Once you have decided the orientation, attach the Upright Post to the Mount Arm using the (2) supplied 10-24 x 3/4" screws. Do not over torque.

Step 2

Push the seat on the desired side all the way back to allow access to the seat bolt.

Depending on the vehicle year, you may have to remove a plastic cap to reveal the seat bolt. This can be done with a small flathead screwdriver or other small tool.

Using an 18 mm socket, remove the existing bolt and set it aside. (You may want to keep the stock bolt for future use.)

Step 3

Slide the M12 X 90 mm cap screw through the top of the Mount Arm and then through the Spacer. Apply a small amount of threadlocker onto the screw threads and tighten the screw into the existing seat mounting hole. Prior to torquing the screw down, adjust the Holster Mount to the user desired location for optimal comfort and accessibility.

Torque to manufacturer's recommended spec. Reinstall the plastic cap as necessary.

Note: There are two holes in the Mount Arm. Jeep JKU models (4 door) will require that you use the hole closest to the holster. Jeep JK (2 door) models can utilize either mounting hole depending upon user preference.
